

The Job Doesn't Stop, and Neither Should Your IT

In construction, IT is crucial; when systems fail, work halts. Many builders lack independent assessments of their vulnerabilities. We analyze your systems, security, and spending, providing a prioritized overview of gaps and necessary fixes, without obligation or changes required.

What It Delivers

Uptime & Continuity

When the office goes down, the job slows with it.

- Confirm your backups actually restore, not just run.
- Know how long you're down before work resumes.
- Build a failover plan for project and estimating software.
- Add a backup connection so one outage doesn't stop everything. Every hour down is labor you're paying for and a deadline getting closer.

Payment & Fraud Protection

Construction gets targeted for payment fraud more than almost any industry.

- Verify any wire or ACH change against a known contact.
- Turn on protection against spoofed and impersonated email.
- Require dual approval before any payment detail changes.
- Set a firm process for vendor banking-change requests. One convincing fake email can reroute a draw or a payment — and the money's gone.

Cost & Licensing

Every system you pay for should earn its place.

- Consolidate software licensed twice across jobsites.
- Reclaim seats and licenses left active for departed staff.
- Cut overlapping tools you're paying for in parallel.
- Uncover recurring spend on tools nobody actually uses. Thin margins mean wasted IT spend comes straight off the top.

Growth & Reliability

The right systems don't just avoid problems — they help you win work.

- Speed up estimating and bid turnaround.
- Give field crews dependable access to what they need.
- Remove the technology friction slowing the office down.
- Free up capacity to quote and win more jobs. Reliable systems mean more bids out the door and more work won.

"Every builder we meet is one stalled system or one fake invoice away from a very bad month. Our job is to find that exposure before it finds them — honestly, with no sales pitch attached."

— Rick Harber, Founder & CEO, Decision Digital

About Decision Digital

Decision Digital is a human-led, AI-powered IT and ConnectWise consultancy, Atlanta-based since 1997. We've run service operations, migrations, and infrastructure ourselves — so we read your environment as operators, not auditors. A ConnectWise Solution Partner, back-to-back WISE Award winner, and ChannelPro Top 20 MSP.

Why Decision Digital

Operators Since 1997

We've run the systems ourselves. We know what's cosmetic and what actually costs you.

Every Finding Drills Down

Not a vague report. Each finding points to the exact gap and where to fix it.

No Changes, No Obligation

The assessment is diagnostic. Nothing changes without your sign-off; the plan is yours.

Human-Led, AI-Powered

Experienced consultants own the findings and stand behind them.

Ideal Use Cases

Multi-Site Builders

General contractors and builders juggling multiple jobsites, office systems, and mobile crews.

Payment-Heavy Operations

Firms handling large vendor and subcontractor payments — the ones fraud targets hardest.

Lean-Margin Shops

Operations where aging systems and wasted licensing come straight off already-thin margins..

Never-Baselined Owners

Firms that have never had an independent read on where their technology and risk actually stand.

AN HONEST BASELINE, BUILT FOR THE FIELD

Before we recommend a single change, we map what's actually running — office and jobsite — and show you where it's bleeding time, money, and risk.
