

Deadlines Don't Move, and Neither Should Your IT

For an accounting firm, IT is crucial; when systems fail, client work stops. Many firms have never had an independent read on their vulnerabilities. We analyze your systems, security, and spending, providing a prioritized overview of gaps and necessary fixes, without obligation or changes required.

What It Delivers

Data Protection

Client financial data is what you're really being trusted with, and it's exactly what attackers want.

- Check whether sensitive client files are encrypted and access-controlled.
- Find out if anything is watching for threats after hours and on weekends.
- Confirm an attack would get caught in minutes, not discovered days later.
- Identify the gaps between what you have and real protection.

Compliance

If you're ever asked how client data is protected, you need a real answer, not a scramble.

- Assess your systems against the safeguards federal rules expect.
- Check whether your security measures are documented and ready for a client, insurer, or review.
- Surface where you'd fall short before someone else does.
- Give you a defensible picture of where compliance actually stands.

Continuity

Every hour of downtime leads to lost time and missed deadlines.

- Confirm your backups actually restore, not just run.
- Verify a failed server could be brought back fast, not rebuilt from scratch.
- Find the single points of failure that stop everything at once.
- Test whether your systems could handle the load when everyone's filing.

Secure Access

The work happens everywhere now, and a lost laptop shouldn't become a breach.

- Check how staff connect from home and on personal devices.
- Find out if people can reach more than they should.
- Identify unprotected devices touching client data.
- Show where remote access is looser than working from the office.

"Every firm we meet is one failed system or one fake invoice away from a very bad month. Our job is to find that exposure before it finds them, honestly, with no sales pitch attached."

— Rick Harber, Founder & CEO, Decision Digital

About Decision Digital

Decision Digital is a human-led, AI-powered IT and ConnectWise consultancy, Atlanta-based since 1997. We've run service operations, migrations, and infrastructure ourselves — so we read your environment as operators, not auditors. A ConnectWise Solution Partner, back-to-back WISE Award winner, and ChannelPro Top 20 MSP.

Why Decision Digital

Operators Since 1997

We've run the systems ourselves. We know what's cosmetic and what actually costs you.

Every Finding Drills Down

Not a vague report. Each finding points to the exact gap and where to fix it.

No Changes, No Obligation

The assessment is diagnostic. Nothing changes without your sign-off; the plan is yours.

Human-Led, AI-Powered

Experienced consultants own the findings and stand behind them.

Ideal Use Cases

Multi-Office Firms

Accounting firms juggling multiple offices, staff systems, and remote work.

Payment-Heavy Operations

Firms moving client funds, refunds, and vendor payments, the ones fraud targets hardest.

Lean-Margin Firms

Operations where aging systems and wasted licensing come straight off already-thin margins..

Never-Baselined Owners

Firms that have never had an independent read on where their technology and risk actually stand.

AN HONEST BASELINE, BUILT FOR YOUR FIRM

Before we recommend a single change, we map what's actually running, office and remote, and show you where it's bleeding time, money, and risk.
