

# Reorganize. Migrate. **Actually Find Your Files.**

MIGRATIONS BUILT FOR HOW YOUR  
TEAM ACTUALLY WORKS

## Why Decision Digital

Most migrations just dump your old mess into a new place. We don't. From data cleanup to site structure, permissions, and naming that makes sense, we rebuild SharePoint so people can actually find things—and keep using it long after go-live.

## Our Track Record

File share, Google Drive, or on-prem—we handle every step with care and a plan. The situations we're brought in to fix:

- ✓ Overwhelmed by shared drive folders
- ✓ Nobody can find the right file
- ✓ SharePoint no one wants to use
- ✓ Records & retention headaches

### Information Architecture

Clear site structures, access controls, and naming conventions—so the new environment makes sense on day one.

### User Adoption & Security

Permission models, training, and Microsoft 365 governance that keep people productive and data protected.

### Data Migration & Automation

Content moves with metadata, version history, and Power Automate flows fully intact.

### Compliance-Ready Setup

Retention policies, compliance tags, and labeling for records-ready environments.

Done fighting file chaos?  
Let's talk SharePoint migration done right.
